

RF Product Selector Guide

Freescal is the global leader in RF transistors for power amplifiers, the most trusted source of RF solutions for more than 30 years. Freescale offers RF solutions for most communication and industrial applications serving wireless infrastructure, broadcast, aerospace, land mobile communication and industrial, scientific and medical (ISM) markets.

With products ranging from less than 100 mW to 1.25 kW using GaAs and LDMOS technologies, Freescale offers the broadest portfolio of RF power transistors. High-performing and innovative, Freescale solutions are available to meet any of today's RF application challenges, including reduction in overall system cost, form factor size reduction and simplified system design. Freescale maintains the highest standards for quality and long term reliability and, as the largest manufacturer of devices, is a proven partner for supply chain security.

Backed by a global team dedicated to RF power products, reference design hardware and product models, Freescale also provides the tools and support required to enable successful designs.

How to Use This Selector Guide

RF Low Power Amplifiers, RF Power Transistors and RF Power Amplifier ICs are FIRST divided into major categories by frequency band. SECOND, within each category, parts are listed by power level. THIRD, within a frequency band, transistors and ICs are further grouped by generation of LDMOS where applicable.

Applications Assistance

Applications assistance is only a phone call away – call the nearest Freescale Semiconductor Sales office or 1-800-521-6274.

Access Data On-Line

Use the Internet to access semiconductor product data at <http://www.freescale.com> or <http://www.freescale.com/rf>. This web site provides you with instant access to parametric search, part number search, product summary pages, data sheets, selector guide information, application information, design tools, package outlines, on-line technical support and much more.

RF General Purpose Amplifiers

Freescale's portfolio of GPAs combine the right level of gain, linearity, noise and power consumption specifications to meet the industry's most demanding applications. From high gain, small-signal applications found in consumer and commercial to industrial applications, Freescale GPAs provide an excellent solution.

RF Transistors

Freescall Semiconductor continues to be the industry leader in RF transistor technology. With recent extensions of the RF transistor portfolio, Freescall now provides power amplifier products for cellular infrastructure, mobile radio, commercial aerospace, industrial, scientific and medical (ISM), VHF/UHF broadcast, and general purpose applications. Technical innovation combined with world-class manufacturing capability allows Freescall to offer world-class product, service and support to its customers.

From our LDMOS and GaAs portfolio, the user can choose from a variety of packages. They include over-molded plastic and air cavity that are microstrip circuit compatible or surface mountable. Many are designed for automated assembly equipment.

RF Power LDMOS Transistors

Freescall Semiconductor LDMOS technology is ideally suited for RF power amplifier applications. Several families of products have been targeted for specific markets including VHF and UHF mobile radio, digital television broadcast, GSM, GSM/EDGE, CDMA, W-CDMA and LTE. The high gain and excellent linear performance of these devices is suitable for any application, including advanced digital modulations and pulsed applications with high signal peak-to-average ratios.

Table 5. Professional Mobile Radio - To 1000 MHz - Class AB

Designed for broadband VHF and UHF commercial and industrial applications. The high gain and broadband performance of these devices make them ideal for large-signal, common-source amplifier applications in 12.5/7.5 volt mobile, portable and base station operation.

★New Product

RF Power GaAs Transistors

Freescale Semiconductor GaAs power transistors are made using an InGaAs pHEMT or HFET epitaxial structure for superior RF efficiency and linearity. The FETs listed in this section are designed for operation in base station infrastructure RF power amplifiers and are grouped according to frequency range and type of application.

RF Power LDMOS Amplifier ICs

Freescall Semiconductor's RF portfolio includes IC designs optimized for wideband applications. For PA designers, IC driver devices offer the benefits of multiple gain stages in one package with most of the decoupling and matching circuitry incorporated into a single low-cost plastic device.

RF Power LDMOS Amplifier ICs

Complete amplifiers with 50 ohm input impedances are available for all popular base station transmitter systems, including GSM, GSM/EDGE, CDMA, W-CDMA, WiMAX and LTE covering frequencies from 748 MHz up to 3600 MHz.

Designed for applications such as macrocell drivers and microcell output stage, these Class AB amplifiers are ideal for base station systems with power requirements up to 120 watts.

Metric dimensions govern — English are in parentheses for reference only.

NOTE 1: A₀, B₀, and K₀ are determined by component size. The clearance between the components and the cavity must be within .05 mm min. to .50 mm max., the component cannot rotate more than 10° within the determined cavity.

NOTE 2: Pitch information is contained in the Embossed Tape and Reel Ordering Information on pg. 32.

Applications and Product Literature

Application Notes of special interest to designers of RF equipment are listed below. This technical documentation is available on the Freescale Semiconductor web site or is available through the Freescale Semiconductor Literature Distribution Center. Phone and fax numbers for ordering literature are listed on the back cover of this book and in the Access Data On-line section.

END OF LIFE RF PRODUCT INDEX

Freescale Semiconductor follows the industry standard “EIA-724 Product Life Cycle Data Model” to track the life cycle of its product. This model tracks the product’s life cycle from “Product Newly Introduced” to “Product Phase Out.” Products can be phased for a variety of reasons: improved product performance, change in technology roadmap, process obsolescence, market decline, etc. When products are

discontinued, a suggested possible replacement device or an alternative source of supply for discontinued devices are made available when possible.

For a list of discontinued devices with possible alternative suppliers, please contact your local Freescale sales office or authorized distributor.
